# Android 组件库

```
JitPack 0.97.1

java 8

androix

minSdkVersion 21

targetSdkVersion 32
```

Android原生组件库,为Html提供Android原生能力,增强H5

map: 5M左右 tim: 14M左右

# Module目录及引用说明

依赖引入 (需要添加jitpack仓库源):

```
1 implementation 'com.github.TYKYTeam.swan-android-libray:module名:版本号'
```

例:

```
1 | implementation 'com.github.TYKYTeam.swan-android-libray:0.2'
```

注:以下使用的传参都是需要Json的字符串,需要调用 JSON. stringify() 方法将对象转为字符串

# webViewBase使用

提供一个CustomWebViewActivity, 首页的MainActivity需要继承于此Activity, 之后再onCreate方法中调用以下两种方法之一,来加载url

- loadLocalurl 设置加载的url并加载
- loadweburl 加载url

PS: loadLocalUrl主要是自动拼接了assets里的本地资源html文件,如下图

由于文件选择的功能与Webview比较耦合,无法单独划分出一个module,所以内置在主module中包含拍照,选择相册图片,录制视频,选择本地视频文件,录音,选择本地音频文件,和选择其他文件

# media使用

## 1.获取剪切板内容

getTextFromClipboard()

用来获取手机剪切板的文本内容

传参: 无需传参

### 返回结果:

```
1 {"code":200,"desc":"","result":"剪切板的内容"}
```

### H5调用示例:

```
if (window.android_media) {
   let result = window.android_media.getTextFromClipboard()
   let text = JSON.parse(result).result
   console.log(text)
}
```

## 2.复制文本

copyTextToClipboard(paramStr)

往手机的剪切板写入内容,实现H5复制功能

### 传参:

```
1 | {
2 | content:"hello world"
3 | }
```

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

### H5调用示例:

```
if (window.android_media) {
   let content = {content:"hello world"}
   let result =
   window.android_media.copyTextToClipboard(JSON.stringify(content))
   console.log(result);
}
```

# 3.拨打电话

callPhone(paramStr)

### 拨打电话,会直接拨号

使用前需要声明电话权限,方法内已作了动态权限申请适配

```
1 | <uses-permission android:name="android.permission.CALL_PHONE" />
```

### 传参:

```
1 | {
2 | phone:"10086"
3 | }
```

## 返回结果:

## H5调用示例:

```
if (window.android_media) {
   let content = {
      phone: "10086"
   }
   let result = window.android_media.callPhone(JSON.stringify(content))
   console.log(result);
}
```

# 4.跳转拨号页面

goToCall

会跳转到拨号页面, 无需申请电话权限

## 传参:

```
1 | {
2 | phone:"10086"
3 | }
```

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

```
if (window.android_media) {
   let content = {
      phone: "10086"
   }
   let result = window.android_media.goToCall(JSON.stringify(content))
   console.log(result);
}
```

## 5.发送短信

sendSms

会跳转到短信发送页面,不会立即发送短信

### 传参:

```
1 {
2 phone:"10086", //手机号码
3 content:"111" //短信内容
4 }
```

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

## H5调用示例:

```
if (window.android_media) {
   let content = {
      phone: "10086",
      content: "111"
   }
   let result = window.android_media.sendSms(JSON.stringify(content))
   console.log(result)
}
```

# 6.图片预览

previewPicture

预览单张图片,之后点击图片会关闭

## 传参:

```
1 {
2 content: "",
3 type: 2
4 }
```

当 type 为1, content 传base64数据;

当 type 为2, content 传图片地址

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

```
if (window.android_media) {
2
       let content = {
3
           content:
   "https://gimg2.baidu.com/image_search/src=http%3A%2F%2Fimg.jj20.com%2Fup%2Fal
   limg%2Ftp01%2F1zZQ214233446-0-
   lp.jpg&refer=http%3A%2F%2Fimg.jj20.com&app=2002&size=f9999,10000&q=a80&n=0&g=
   On&fmt=jpeg?sec=1647143194&t=b67961882a5e7d01f6ecd8a503a9db47",
4
           type: 2
5
       }
       let result = window.android_media.previewPicture(JSON.stringify(content))
6
7
       console.log(result)
   }
8
```

## 7.扫描二维码

qrScan 扫描二维码

### 传参:

#### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

### H5调用示例:

```
1 //object格式与返回结果一样,result即为二维码的文本数据
   window.qrScanResult = function(object) {
2
3
       console.log(object);
4 }
5
6 function qrScan() {
7
      if (window.android_media) {
8
           let content = {
9
               callBackMethod: "qrScanResult"
10
11
           window.android_media.qrScan(JSON.stringify(content))
12
       }
13 }
```

## 8.语音播放文本

speakText 播放文本 (如果没有tts引擎, 会没法播放语音)

### 传参:

```
1 {
2 content: "这是一段测试语音的文本"
3 }
```

#### 返回结果:

### H5调用示例:

```
1 if (window.android_media) {
2   let content = {
3      content: "这是一段测试语音的文本"
4   }
5   let result = window.android_media.speakText(JSON.stringify(content))
6   console.log(result)
7 }
```

# 9.获取手机通讯录

getContacts

### 传参:

```
1 {
2 callBackMethod: "myContacts" //回调方法
3 }
```

### 返回结果:

## H5调用示例:

```
window.myContacts = function(object) {
2
        console.log(object);
3
   }
4
5 if (window.android_media) {
6
      let content = {
7
            callBackMethod: "myContacts"
8
9
      let result = window.android_media.getContacts(JSON.stringify(content))
10
      alert(result);
       console.log(result)
11
12 }
```

## 还未实现功能清单

- 8. 图片压缩 (H5传参)
- 9. 文件下载
- 10. 文件预览(文件先下载再预览)
- 11. 安装apk

# notification通知

## 1.发送通知

sendNotification 状态栏显示一条新通知

## 传参:

```
1 {
2 content: "测试内容11111",
3 title:"测试标题"
4 }
```

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

### H5调用示例:

```
1 if (window.notification) {
2    let content = {
3        content: "测试内容11111",
4        title:"测试标题"
5    }
6    let result = window.notification.sendNotification(JSON.stringify(content))
7    console.log(result)
8 }
```

# 2. 设置桌面小红点

setBargeCount

#### 传参:

```
1 {
2 content: "11" //未读数
3 }
```

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

```
if (window.notification) {
   let content = {
      content: "11"
}
let result = window.notification.setBargeCount(JSON.stringify(content))
console.log(result)
}
```

## share

默认分享会弹出分享方式 (如分享给微信好友,复制文本,分享到QQ等选项)

## 1.分享文本

shareText 弹出分享的对话框,选择某一应用进行分享

## 传参:

```
1 {
2 content: "这是分享的文本内容"
3 }
```

## 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

## H5调用示例:

```
1 if (window.share) {
2    let content = {
3        content: "这是分享的文本内容"
4    }
5    let result = window.share.shareText(JSON.stringify(content))
6    console.log(result)
7 }
```

# 2.分享图片

shareImage 弹出分享的对话框,选择某一应用进行分享

目前只支持传base64图片数据

## 传参:

1 | {

2

content:

"data:image/png;base64,iVBORwOKGgoAAAANSUhEUgAAACkAAAAMCAIAAADWVCVOAAAACXBIWX MAABJ0AAASdAHeZh94AAAAEXRFWHRTb2Z0d2FyZQBTbm1wYXN0ZV0Xzt0AAAiqSURBVFiFfVhbbx1 XFf6+vfecg+1i05fGhgapOUVVo60BtZXSllAeGpCiIlGJ0D60LxEFiRf+AMpTRMUP4CUP50FH0h0o BQotJdA0QBsaEkJxjEOTFJxYqW/Hl+NzZmavxcOemTN2SJcsn5k9M/tb98vmUnudgALF/0CqIElCV IVFYj1ckhRREqq1D/qbFe+Hy+wrzZ7AEARIICxpAUIoVFQNCfT/jGHYQBXihWTYnYYkw8bh6w2kAF TUMGPeKFShioy7nGEiR9N8J4UCKqIFhzTcDKKbFZPLo8jfUpCiCoCkIUAQmzwlyPQcbkkamzSfL2Y XKlpez5Wbv6bFniT7H7qc1eyDAC8f3qodP2m7vWTnSLxtW7x9BNta0XBDaxWtVXVk0O3eYSouWFcV iceV6xtxrJ/ZXavVjEIznnLQzBw5ajCTC4AsLRHwf7tSvfpfo2JvfuRoI5rU2MQ4cVFSraRDAzz04 MDXPx/VKyRSwZ8urr78+6X1Lr5wYOArjw+1hqOywsvmyMUHoC63cjBGeAUDvz1jVABYFQwVqBLik0 St97oRxz99e6Mama89ZqyZnev98s3FhcXY07z21/b6WvLcUzsaDVu43iZUZPYGgtwFUwSA9cs3Bqa vF/azKhDAQIO7KRWopHHy2p+7nxpbGh8/+eO5W/0xNVZVxcubF1c9efTwtu0th0xEFqFVNofr80UA kF46MvkrI51j579KqCEM1QCGR01ivr3+g1+80zxxi3usjUTUwpAk+fbF9b11/9TBoQP3N600BJZHe rh1mXt1JievzNrL/yZUVH8Wrb5ve4W5BFRSyXAhoHx0LZm/sDIwltAGcRRQMNrxpX9dGzu5ED/b9Y 99tmUt0He9300IV8qcqje6MG2XOqBiyEWz8QfXwceTAqu3tqzZ1kOutrO9yh/9bkloHn9wwLmQqqi qJAypUAcQqhrkXu3YqauUGIBXTVVEZN++fXv37jXGAHjnnXdmZmYCQLPZfOKJJ4aHhycnJ0WkjE2f WBE1stLGD3+9MP1h71tpb8/yE/pwL8cYsbjiPrhh8n1ERET279//zDPPOOCAZM/PT09Ph6f1ev3Ik SMTEXOnTp3aiq3eqqgqKN0NnL7Q+eZX+ykFgIrS00QZGICaazc4v1h+w3t/9uzZc+f0kXz11VcuXL jgcxIRa61zzt9GFDWqRr1RTY2NGi6kfSB3exKAyVmFAnz3sokTBYRMaVIR7/3MzMzVq1dF5Pz589e vXy9jhE//D7aKvbEqsXvdE9wqdkvaDxyEvJgZILr5Uac17DvdiqY9miSF955kmqYA0jT13he7iEi4 LvMRyIq3kK6prtqa0FTrLjh5IXrm51oqm2vf+/bqB4vu8qXht0/0uia+tuHbvkhPIhKYCCsBL1xsw YZi3dUWqkMeRslqJSSOTRVdVV2ucqJwNTd832jl5tlk13/iXj294dIU27dvHxkZITk2NjY4OFiv1w 8dOnTmzJldu3YNDg7Oz8+naRp4KmjFVeJoIDVWAnbNliQkVECT15KsaBJAdPOvZvq3ojaF86rey+H  $\verb|Dh5988knn3AsvvLCwsDA+Pv78888f03bMGNNqtSYnJ5Mk2SL3smtYEymtAk]Tr0e5tpn7m6rcEv]1|$ U6h2V3Hx5XRtIUGUMEp97L1fX16+cuVKiLHV1dXXX399bGxsz549AC5dunTy5Mk4jrGZUhqYozBCK livsJzvCyM6hZLMUvzcP/XqW4kyRiVBlEqvSZJXX3319onT4evl5eVop3P8+PHBwUEA7Xa71+vhNj JK0IqxIfU2a1SFIUQUpeLm8soEqr6zYuJeqiiFS+BSL0mSLC4uLi4u1rdokmR1ZeV2yIIsoDRKo6D S1KqGoVUK4rOoJf1eQjHx6NqD3/CXfpLEcTcd2oite9/+GIW7kQeRYWvZrCKP6aKVAEmX97RUqKk1 Ko8e29j1kLw32bnc7qxvJMlso9GoVqu3AywtLd0J24FKq8YqKGCzqqIXLIRWVaeF0AQUrlYZf0BhM zqmcz8Xfy1N00ceeeTaqQMsp2MAwIsvvnqn7BQEjeQ6b1b6rS0yb1cArtS3Mze8Vkd2xX5CU3jvDx 48ePTo0VDHynTixIk7YXsq930jZLPqixhT1VwBdFnxViD30AC9TtJb7qpPvfcvvfTSG2+8cbvcw3N ZWW7mfg4K2ahKnlO1KOGqea8YykzwBgDpWuyX18RLmqZTU1NTU1N3grmD3AYwkueWRk1KRSyjIq9p 4f8Bu7Owlq7EX5744ufGDniogqFbVVCBDRctlap/HxnvsNFF1fqsVVJSQbiK7tibWiuk0jiLiutDB qEDuaJ7DyNPwF+4skjjPtG6Z2frb1GE9CRkb03VHY1b9dZCbajJoZRDCZo2pdJIBm/EGHF1YQSj94 +kz+2T7QMMg+OWltkFNSvDyMNQ6BZmbolxNC6iEUAiZ+vVaGzn+P679n6yfug9pbm2gQwCLWVTUgg NZIoxnmhGeu8Inn3AP31f2mpaa7JgKldSBD9XbhpVu+3u0vUFNGrVgVrzrsGhPaOt3SMj94w072zQ AsDdd4++0b328vt+eYUe1hsT4nioIveO4tHdemi3f3g8aVRIGmxujfuDEsCl5fVi9A6iL1xbnD0/0 3rvtoGdA7XBStSoGEuyn4Kgmnj9x5z//ln942zNi7urqUc+7R/fo3t3YkcDFavGQKWfRMvUx15ur2 fOnbfK4gWACSZ0dP1hXou0QEC9YLYt332rElnznYeTiVFUrJqAFcpGP6D74gZmQrBxud3JJ95+84T +AUQxF/eH4iIcy7RloVwry3oubkmYABxmrezVrJhnwCTzBJyN/WQxY5cG9q2DJ7bUj6JvyMZ9hSmU nR99QKF511FFdt6SQ/YTM4vDCfSn6JLQm5aZ20LDOBnOPJB5UPmIASwcr3wYoXn455FS6sECc5vgV SEi4bAhJNTiUdjlfOH/cmTEkykkAAAAAElFTkSuQmCC"

```
4  }
5  let result = window.share.shareImage(JSON.stringify(content))
6  console.log(result)
7 }
```

## 3.分享图文

shareTextImage 弹出分享的对话框,选择某一应用进行分享目前只支持传base64图片数据,测试发现文字没法获取,和分享图片效果一样

#### 传参:

```
1 {
2 title:"分享的标题",
3 content:
```

```
5  }
6  let result = window.share.shareTextImage(JSON.stringify(content))
7  alert(result);
8  console.log(result)
9 }
```

## 4.分享文本给微信好友

shareToWechatFriend

分享文本给微信好友,会直接弹出选择好友的列表页面

#### 传参:

```
1 {
2 content: "分享的文本内容"
3 }
```

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

## H5调用示例:

```
1 if (window.share) {
2    let content = {
3        content: "分享的文本内容"
4    }
5    let result = window.share.shareToWechatFriend(JSON.stringify(content))
6    console.log(result)
7 }
```

# device设备

# 1.获取设备mac地址

getMacAddress

获取设备mac地址

传参: 无需

## 返回结果:

```
1 //成功 result中即为mac地址数据
2 {"code":200,"desc":"","result":""}
```

```
1  if (window.device) {
2    let result = window.device.getMacAddress()
3    alert(result);
4  }
```

## 2.获取唯一设备id

getUniqueDeviceId

获取唯一设备id

传参: 无需

返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":"2196aa50b16cd36d39df62298561809a1"}
```

## H5调用示例:

```
1  if (window.device) {
2    let result = window.device.getUniqueDeviceId()
3    alert(result);
4  }
```

# 3.判断当前设备是否为平板

isTablet

当前设备是否为平板

传参: 无需

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":true}
```

## H5调用示例:

```
1  if (window.device) {
2    let result = window.device.isTablet()
3    alert(result);
4  }
```

## 4.判断当前设备是否为模拟器

isEmulator

判断当前设备是否为模拟器

传参: 无需

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":false}
```

```
if (window.device) {
   let result = window.device.isEmulator()
   alert(result);
}
```

# 5.获取当前设备系统信息

getDeviceInfo

获取当前设备系统信息

传参: 无需

## 返回结果:

```
1 //成功
2 {
    "coae ._
"desc":"",
"result":{
    "model
3
       "code":200,
4
6
           "model":"ZUKZ2121",//设备型号
          "manufacturer":"ZUK" //设备厂商
7
          "versionName":"11",//系统版本名
8
9
          "versionCode":30,//系统版本号
    }
10
11 }
```

## H5调用示例:

```
if (window.device) {
   let result = window.device.getDeviceInfo()
   alert(result);
}
```

# 6.判断是否为某个机型品牌

isBrand

判断当前机型是否为某个品牌

### 传参:

```
1 {
2     "content": "1"//型号类型,详见下表
3 }
```

类型	品牌
1	360
2	酷派
3	金立
4	谷歌
5	HTC
6	华为
7	乐视
8	联想
9	LG
10	魅族
11	摩托罗拉
12	努比亚
13	一加
14	Орро
15	三星
16	锤子
17	索尼
18	Vivo
19	小米
20	中兴

## 返回结果:

```
1 ("code":200,"desc":","result":false)
```

```
1 //判断是否为360品牌手机
2
  if (window.device) {
3
      let content = {
          "content": "1"
4
5
      let result = window.device.isBrand(JSON.stringify(content))
6
7
      console.log(result);
8
      alert(result);
9
  }
```

## 7.截图

takeScreenshot

## 传参:

```
1 {
2 callBackMethod: "getScreenshot"
3 }
```

#### 返回结果:

```
1 //getScreenshot中回调的result为图片本地路径
2 {"code":200,"desc":"","result":"/storage/emulated/0/DCIM/com.tyky.acl/1653012
630717_100.JPG"}
```

### H5调用示例:

```
window.getScreenshot = function(res){
1
 2
        console.log(res);
3
   }
4
5 if (window.device) {
6
      let content = {
7
            callBackMethod: "getScreenshot"
8
9
       let result = window.device.takeScreenshot(JSON.stringify(content))
10
       console.log(result);
       alert(result);
11
12 }
```

# 8.获取当前屏幕方向状态

getScreenOrientation

传参: 无需

### 返回结果:

```
1 //0:竖屏 1: 横屏
2 {"code":200,"desc":"","result":0}
```

```
if (window.device) {
   let result = window.device.getScreenOrientation()
   console.log(result);
   alert(result);
}
```

## 9.获取屏幕分辨率

getScreenWH

传参: 无需

返回结果:

```
1 | "{"code":200,"desc":"","result":{"width":1080,"height":1920}}"
```

## H5调用示例:

```
if (window.device) {
   let result = window.device.getScreenWH()
   console.log(result);
   alert(result);
}
```

# storage使用

# 1.保存数据

saveStorage

保存数据到Android内置的SharePerfence

### 传参:

```
1 {
2 key: "test",
3 value: "hello woll" //value可以是布尔值,字符串,整数,不能是一个JsonObject对象
4 }
```

## 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":false}
```

```
if (window.storage) {
    let content = {
        key: "test",
        value: "hello woll"
}
let result = window.storage.saveStorage(JSON.stringify(content))
alert(result);
console.log(result)
}
```

## 2.读取数据

getStorage

根据key值去获取保存的数据

#### 传参:

```
1 | {
2 | key: "test"
3 | }
```

### 返回结果:

```
1 //成功 若result为空,则表示该key没有对应的数据
2 {"code":200,"desc":"","result":""}
```

## H5调用示例:

```
if (window.storage) {
   let content = {
        key: "test"
   }
   let result = window.storage.getStorage(JSON.stringify(content))
   alert(result);
   console.log(result)
}
```

# listener使用

# 1. 注册网络断开连接监听

registerNetworkDisconnectionListener

注册网络断开连接的监听回调

## 传参:

```
1 //传两个js回调的方法名,之后Android原生会执行对应的JS方法
2 {
3 "callBackMethod": "networkDisconnect"
4 }
```

## 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

```
window.networkDisconnect = function() {
2
       alert("网络已断开")
3
   }
4
5 if (window.listener) {
6
     let content = {
7
           "callBackMethod": "networkDisconnect"
8
9
      let result =
   window.listener.registerNetworkDisconnectionListener(JSON.stringify(content)
      console.log(result)
10
11 }
```

# 2. 注册网络成功连接监听

registerNetworkConnectionListener

注册网络成功连接监听回调

### 传参:

```
1 //传两个js回调的方法名,之后Android原生会执行对应的JS方法
2 {
3 "callBackMethod": "networkConnect"
4 }
```

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

### H5调用示例:

```
window.networkConnect = function() {
2
      alert("网络已连接")
3 }
4
5 if (window.listener) {
    let content = {
6
7
           "callBackMethod": "networkConnect"
8
      let result =
   window.listener.registerNetworkConnectionListener(JSON.stringify(content))
      console.log(result)
10
11 }
```

## 3.来电监听

registerPhoneListener

来电时候的监听回调

### 传参:

```
1 //传递个js回调的方法名,之后Android原生会执行对应的JS方法
2 {
3 "callBackMethod": "phoneCall"
4 }
```

## 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

### H5调用示例:

```
1 window.phoneCall = function() {
       alert("来电了。。")
3 }
4
5 if (window.listener) {
6
     let content = {
           "callBackMethod": "phoneCall"
7
8
9
      let result =
   window.listener.registerPhoneListener(JSON.stringify(content))
      console.log(result)
10
11 }
```

## map

## 1. 获取当前地址

getLocation

获取当前地址

### 传参:

```
1 //传递个js回调的方法名,之后Android原生会执行对应的JS方法
2 {
3 "callBackMethod": "getLocation"
4 }
```

#### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

```
window.getLocation = function(object) {
    //object内容为{"addrStr":"中国广东省深圳市福田区梅林街道梅坳八路","city":"深圳市","district":"福田区","province":"广东省","street":"梅坳八路"}
    console.log(object);
    alert(JSON.stringify(object))
}
```

```
function startLocation() {
8
        if (window.map) {
9
            let content = {
                "callBackMethod": "getLocation"
10
11
12
            let result = window.map.getLocation(JSON.stringify(content))
13
            alert(result)
14
            console.log(result)
15
        }
16 }
```

## 2.地图检索

poiSearch

打开地图页面,并展示当前的位置

### 传参:

```
1 {
2          "keyword": "小吃",
3          "city": "深圳市",
4          "tags": "火锅",
5          "callBackMethod": "getLocation"
6     }
```

## 返回结果:

```
1 //成功
2
3
    "code": 200,
    "desc": "",
4
    "result": [
5
6
         {
7
              "address": "广东深圳市罗湖区人民路二横街12号负1层",
              "area": "罗湖区",
8
              "city": "深圳市",
9
10
              "name": "东门小吃街",
              "latitude": 22.552882,
11
              "longitude": 114.127109,
12
              "phoneNum": "(0755)82221797",
13
              "province": "广东省"
14
        }
15
16
    ]
17 }
```

```
window.getLocation = function(object) {
console.log(object);
alert(JSON.stringify(object))

}

let content = {
    "keyword": "小吃",
    "city": "深圳市",
```

```
9 "tags": "火锅",
10 "callBackMethod": "getLocation",
11 }
12 if (window.map) {
13 window.map.poiSearch(JSON.stringify(content))
14 }
```

## 3.判断当前是否在某地点附近

ptInCircle

传入经纬度坐标, 转为具体地址信息

### 传参:

```
1 {
2    "latitude": 22.57871696606192,
3    "longitude": 114.06792497377637,
4    "distance": 70,
5    "callBackMethod": "getLocation"
6  }
```

- latitude 目标点纬度
- longitude 目标点经度
- distance 目标点范围半径 (单位为m)

#### 返回结果:

```
1 //成功
2 {
 3
        "code": 200,
        "desc": "",
4
5
        "result": {
6
             "address": "广东省深圳市福田区梅坳三路",
7
             "area": "福田区",
             "city": "深圳市",
8
9
             "latitude": 22.5790620003812,
10
             "longitude": 114.06740399999997,
11
             "name": null,
12
             "phoneNum": null,
             "province": "广东省",
13
             "street": "梅坳三路"
14
        }
15
16 }
```

```
window.getLocation = function(object) {
1
2
       console.log(object);
3
       alert(JSON.stringify(object))
4
  }
5
6 let content = {
7
       "latitude": 22.57871696606192,
8
       "longitude": 114.06792497377637,
9
       "distance": 70,
```

## 4.地址转坐标

geocode

传入地址, 转为经纬度坐标

## 传参:

```
1 {
2     "endName": "广东省深圳市福田区梅林街道梅都社区中康路136号深圳新一代产业园4栋M层沿街商铺(手扶梯旁)",
3     "city": "深圳",
4     "callBackMethod": "getLocation"
5 }
```

#### 返回结果:

```
1 //成功
2
   {
3
         "code": 200,
         "desc": "",
4
5
        "result": {
             "address": null,
6
7
             "area": null,
             "city": null,
8
9
              "latitude": 22.57871696606192,
              "longitude": 114.06792497377637,
10
              "name": null,
11
             "phoneNum": null,
12
              "province": null,
13
              "street": ""
14
15
         }
16 }
```

```
window.getLocation = function(object) {
2
       console.log(object);
3
       alert(JSON.stringify(object))
4
   }
5
6
  let content = {
7
       "endName": "广东省深圳市福田区梅林街道梅都社区中康路136号深圳新一代产业园4栋M层沿街
   商铺(手扶梯旁)",
8
      "city": "深圳",
9
       "callBackMethod": "getLocation"
10
   }
```

```
if (window.map) {
   let result = window.map.geocode(JSON.stringify(content))
   alert(result)
   console.log(result)
}
```

## 5.坐标转地址

reverseGeoCode

传入经纬度坐标, 转为具体地址信息

### 传参:

```
1  {
2     "latitude": 22.579062,
3     "longitude": 114.067404,
4     "callBackMethod": "getLocation"
5  }
```

### 返回结果:

```
1 //成功
 2 {
        "code": 200,
 3
 4
        "desc": "",
 5
        "result": {
             "address": "广东省深圳市福田区梅坳三路",
 6
 7
             "area": "福田区",
8
             "city": "深圳市",
9
             "latitude": 22.5790620003812,
10
             "longitude": 114.06740399999997,
            "name": null,
11
             "phoneNum": null,
12
             "province": "广东省",
13
             "street": "梅坳三路"
14
       }
15
16 }
```

```
window.getLocation = function(object) {
1
2
       console.log(object);
3
        alert(JSON.stringify(object))
4 }
5
6 | let content = {
7
       "latitude": 22.579062,
8
       "longitude": 114.067404,
       "callBackMethod": "getLocation"
9
10 }
11
12 if (window.map) {
       let result = window.map.reverseGeoCode(JSON.stringify(content))
13
        alert(result)
```

```
15 console.log(result)
16 }
```

# 6.计算两点距离

getDistance

闯入两个点的经纬度, 计算两点的距离

## 传参:

```
1  {
2     "startLatitude": 22.579054,
3     "startLongitude": 114.067389,
4     "endLatitude": 22.57871696606192,
5     "endLongitude": 114.06792497377637
6  }
```

• startLatitude 起点纬度

• startLongitude 起点经度

• endLatitude 终点纬度

• endLongitude 终点经度

## 返回结果:

```
1 //成功 单位为m
2 {"code":200,"desc":"","result":67.15}"
```

## H5调用示例:

```
1 //公司位置和荣耀体验店的距离
2 let content = {
3
     "startLatitude": 22.579054,
      "startLongitude": 114.067389,
       "endLatitude": 22.57871696606192,
6
       "endLongitude": 114.06792497377637
7 }
8 if (window.map) {
9
       let result = window.map.getDistance(JSON.stringify(content))
10
       alert(result)
11
       console.log(result)
12 }
```

# 待完成功能

# mapNav 地图导航

## 1.地图显示当前位置

showLocationInMap

打开地图页面,并展示当前的位置

传参: 无需

## 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

## H5调用示例:

```
if (window.mapNav) {
   let result = window.mapNav.showLocationInMap()
   alert(result)
   console.log(result)
}
```

# 2.步行规划

walkingRouteSearch

## 传参:

```
1 {
2    "startName": "腾讯大厦",
3    "startCityName": "深圳",
4    "endName": "新一代产业园",
5    "endCityName": "深圳",
6 }
```

- startName 起点名称
- endName 终点名称
- startCityName 起点所在城市名
- endCityName 终点所在城市名

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

```
if (window.mapNav) {
2
       let content = {
           "startName": "腾讯大厦",
3
4
           "startCityName": "深圳",
5
           "endName": "新一代产业园",
           "endCityName": "深圳",
6
7
       }
8
       let result = window.mapNav.walkingRouteSearch(JSON.stringify(content))
9
        alert(result)
       console.log(result)
10
11 }
```

## 3.骑行规划

ridingRouteSearch

### 传参:

```
1 {
2     "startName": "腾讯大厦",
3     "startCityName": "深圳",
4     "endName": "新一代产业园",
5     "endCityName": "深圳",
6  }
```

- startName 起点名称
- endName 终点名称
- startCityName 起点所在城市名
- endCityName 终点所在城市名

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

```
if (window.mapNav) {
1
2
       let content = {
           "startName": "腾讯大厦",
3
            "startCityName": "深圳",
4
           "endName": "新一代产业园",
5
6
            "endCityName": "深圳",
       }
7
8
       let result = window.mapNav.ridingRouteSearch(JSON.stringify(content))
9
        alert(result)
10
        console.log(result)
11 }
```

## 4.驾车规划

drivingRouteSearch

### 传参:

```
1 {
2     "startName": "腾讯大厦",
3     "startCityName": "深圳",
4     "endName": "新一代产业园",
5     "endCityName": "深圳",
6  }
```

- startName 起点名称
- endName 终点名称
- startCityName 起点所在城市名
- endCityName 终点所在城市名

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

### H5调用示例:

```
1 if (window.mapNav) {
    let content = {
          "startName": "腾讯大厦",
3
           "startCityName": "深圳",
4
5
          "endName": "新一代产业园",
6
           "endCityName": "深圳",
     }
7
8
      let result = window.mapNav.drivingRouteSearch(JSON.stringify(content))
9
       alert(result)
10
       console.log(result)
11 }
```

# 5.步行导航

walkNavigation

## 传参:

```
1 {
2 "endName": "新一代产业园",
3 }
```

• endName 终点地址名称 (限制为当前位置的城市)

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

```
1 if (window.mapNav) {
2   let content = {
3         "endName": "三九花园",
4   }
5   let result = window.mapNav.walkNavigation(JSON.stringify(content))
6   alert(result)
7   console.log(result)
8 }
```

# 6.骑行导航

cycleNavigation

## 传参:

```
1 {
2 "endName": "新一代产业园",
3 }
```

• endName 终点地址名称 (限制为当前位置的城市)

## 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

## H5调用示例:

```
1  if (window.mapNav) {
2    let content = {
3         "endName": "三九花园",
4    }
5    let result = window.mapNav.cycleNavigation(JSON.stringify(content))
6    alert(result)
7    console.log(result)
8  }
```

# 待完成功能

1. 地图选点

## handware

# 1.获取当前电量数值

getBattery

获取当前电量数值

传参: 无需

```
1 //成功
2 {"code":200,"desc":"","result":"98%"}
```

```
if (window.hardware) {
   let result = window.hardware.getBattery()
   alert(result)
   console.log(result)
}
```

# 2.获取当前网络状态

getNetworkState

获取当前网络状态

传参: 无需

## 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":"NETWORK_WIFI"}
```

### result字段的数值如下:

- NETWORK\_ETHERNET 以太网
- NETWORK\_WIFI
   Wifi
- NETWORK\_4G
- NETWORK\_3G
- NETWORK\_2G
- NETWORK\_UNKNOWN 未知网络
- NETWORK\_NO 无网络

## H5调用示例:

```
if (window.hardware) {
   let result = window.hardware.getNetworkState()
   alert(result)
   console.log(result)
}
```

# 3.获取媒体最大音量

getMaxVolume

获取当前网络状态

传参: 无需

```
1 //成功
2 {"code":200,"desc":"","result":"25"}
```

```
1 if (window.hardware) {
2    let result = window.hardware.getMaxVolume()
3    alert(result)
4    console.log(result)
5 }
```

## 3.获取媒体音量

getVolume

获取当前媒体音量

传参: 无需

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":"11"}
```

## H5调用示例:

```
if (window.hardware) {
   let result = window.hardware.getVolume()
   alert(result)
   console.log(result)
}
```

# 4.设置媒体音量

setVolume

设置当前的媒体音量

### 传参:

```
1 | {
2 | content: "11"
3 | }
```

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

```
if (window.hardware) {
   let content = {
      content: "11"
   }
   let result = window.hardware.setVolume(JSON.stringify(content))
   alert(result)
   console.log(result)
}
```

# 5.获取屏幕亮度

getBrightness

获取当前屏幕亮度

传参: 无需

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":"11"}
```

### H5调用示例:

```
if (window.hardware) {
   let result = window.hardware.getBrightness()
   alert(result)
   console.log(result)
}
```

# 6.设置屏幕亮度

setBrightness

设置当前的屏幕亮度

### 传参:

```
1 | {
2 | content: "11"
3 | }
```

注: 亮度范围为0-255

## 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

由于设置屏幕亮度需要权限的申请,所以第一次设置屏幕亮度会出现不成功(因为是申请权限操作), 返回的结果为

```
1 | "{"code":202,"desc":"未授予权限,设置亮度失败","result":""}"
```

```
if (window.hardware) {
   let content = {
      content: "11"
}
let result = window.hardware.setBrightness(JSON.stringify(content))
alert(result)
console.log(result)
}
```

## 未完成

- 0. NFC
- 1. 蓝牙配对
- 2. 指纹识别
- 3. 人脸识别(包含活体检测)

# debugger

注意:由于配置页面中需要扫一扫的功能,目前是复用了media的Module中的扫一扫页面,导致 使用此模块需要前提引入media的模块

# 1.跳转到debugger页面

goSettingPage

跳转到debugger页面,可输入一个在线地址用来测试页面功能(也含有扫一扫功能)

### 传参: 无需

## 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

## H5调用示例:

```
1 if (window.debugger) {
2    let result = window.debugger.goSettingPage()
3    console.log(result)
4 }
```

# 2.Bugly配置

目前引入了Bugly对接,**注意公司的网络环境对Bugly有限制,无法测试,建议使用移动网络** 

## 使用步骤:

在AndroidManifest文件中,声明application,并修改Bugly的配置

```
<application
   android:name="com.tyky.webviewBase.BaseApplication"
   android:allowBackup="true"
   android:icon="@mipmap/ic_launcher"
   android:label="AndroidComponentLibrary"
   android:roundIcon="@mipmap/ic_launcher_round"
   android:supportsRtl="true"
   android:networkSecurityConfig="@xml/network_security_config"
   android:theme="@style/Theme.AndroidComponentLibrary"
   tools:targetApi="n">
   <activity android:name=".MainActivity">
       <intent-filter>
           <action android:name="android.intent.action.MAIN" />
           <category android:name="android.intent.category.LAUNCHER" />
       ⟨intent-filter>
   </activity>
   ←!-- 配置APP ID --->
   <meta-data
       tools:node="replace"
       android:name="BUGLY_APPID"
       android:value="4ec93574ce" />
   ←!— 配置APP版本号 →
   <meta-data
       tools:node="replace"
       android:name="BUGLY_APP_VERSION"
       android:value="test-version" />
   ←!— 配置APP集道号 →
   <meta-data
       tools:node="replace"
       android:name="BUGLY_APP_CHANNEL"
       android:value="m-debug" />
   <meta-data
       tools:node="replace"
       android:name="BUGLY_ENABLE_DEBUG"
       android:value="true" />
⟨application>
```

注: debugger默认有个appld,下面这个是在APP的AndroidManifest.xml文件,会将debugger模块中的 AndroidManifest.xml 覆盖掉

```
1 <!-- Bugly配置 -->
2 <!-- 配置APP ID -->
3 <meta-data
4 tools:node="replace"
5 android:name="BUGLY_APPID"
6 android:value="4ec93574ce" />
```

```
7 <!-- 配置APP版本号 -->
   <meta-data
9
      tools:node="replace"
      android:name="BUGLY_APP_VERSION"
10
11
      android:value="test-version" />
12 <!-- 配置APP渠道号 -->
13
   <meta-data
      tools:node="replace"
14
15
      android:name="BUGLY_APP_CHANNEL"
16
      android:value="m-debug" />
   <!-- 配置Bugly调试模式(true或者false)-->
17
18 <meta-data
19
       tools:node="replace"
20
      android:name="BUGLY_ENABLE_DEBUG"
       android:value="true" />
21
```

### 如果有需求需要改动,只需要在主Module中,修改上述数值即可

注意: BaseApplication中是使用了**反射+注解**的方式实现了Module自动初始化(假如Module中使用的库需要在Application中进行初始化)

## 剩余功能

- 3. h5是否也要做成可配置的方式,来实现更换接口地址(优先读storege里的数据),入口设计思路为**依次按下音量键** + 和 次
- 4. 360加固快捷打包

# update使用

更新后台的部署操作,及更新

考虑几套更新策略

# page

# 1.跳转其他APP页面

gotoApp

跳转其他APP页面

### 传参:

```
1 {
2    "packageName": "com.android.settings",//app应用应用包名
3    "activityName": "com.android.settings.Settings"//具体的某个页面Activity(全包名)
4 }
5
```

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

```
if (window.page) {
1
2
       //下面这里是进入设置页面
3
       let content = {
           "packageName": "com.android.settings",
4
5
           "activityName": "com.android.settings.Settings"
6
7
       let result = window.page.gotoApp(JSON.stringify(content))
8
       console.log(result)
9
 }
```

## 2.使用手机外部浏览器打开链接

openUrlByBrowser

使用手机的浏览器, 打开链接

### 传参:

```
1 {
2    "content": "https://www.baidu.com",
3  }
4
```

#### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

### H5调用示例:

```
1 if (window.page) {
2    //下面这里是进入设置页面
3    let content = {
4         "content": "https://www.baidu.com/",
5    }
6    let result = window.page.openUrlByBrowser(JSON.stringify(content))
7    console.log(result)
8 }
```

## tim

腾讯云IM模块

目前使用此模块,会弹出有个错误提示(应用频繁停止),怀疑是存储权限没有给到导致,但之后授权 重新打开APP,就不会出现此问题

依赖之后,需要配置主module的Androidmainfest文件

```
android:name="com.tencent.qcloud.tim.demo.DemoApplication"
tools:replace="android:allowBackup"
```

## 1.进入登录页

gotoImLogin 进入IM内置的登录页

传参: 无

返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

## H5调用示例:

## 2.IM登录

login

传参:

```
1 {
2 "userId": "5913635",//im的userId
3 "userSig": "",//im的签名,不传会使用内置的sdkid计算
4 "isGotoPage": true //是否登录后跳转到IM的会话列表页面
5 }
```

### 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

## H5调用示例:

```
if (window.tim) {
    let content = {
        "userId": "5913635",
        "userSig": "",
        "isGotoPage": true
}
let result = window.tim.login(JSON.stringify(content))
alert(result)
}
```

# 3.IM退出

logout

传参: 无需

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

```
1  if (window.tim) {
2    let result = window.tim.logout()
3    alert(result)
4  }
```

# 4.获取消息未读数

getUnreadCount

使用前,需要调用上述2中的IM登录

### 传参:

```
1 | {
2     "callBackMethod": "loadUnreadCount",
3 | }
```

## 返回结果:

```
1 //成功
2 {"code":200,"desc":"","result":""}
```

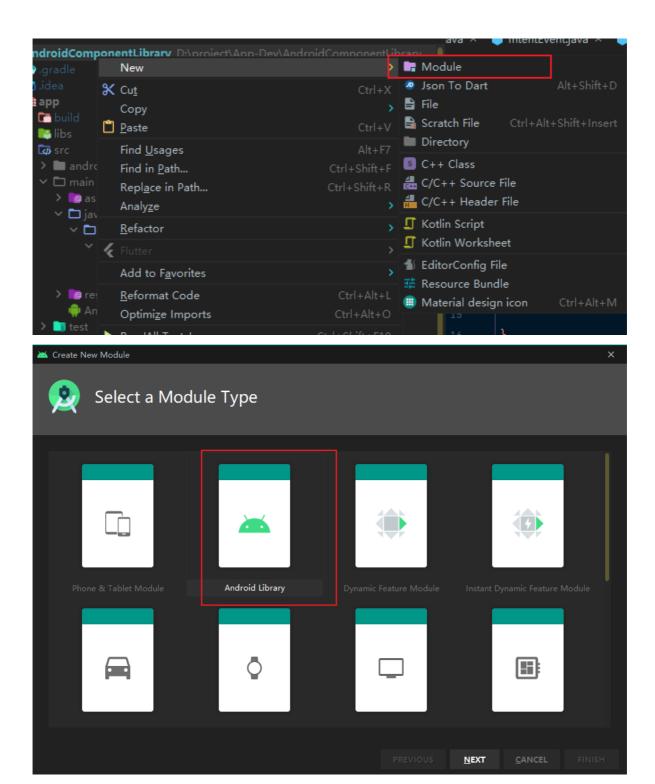

## H5调用示例:

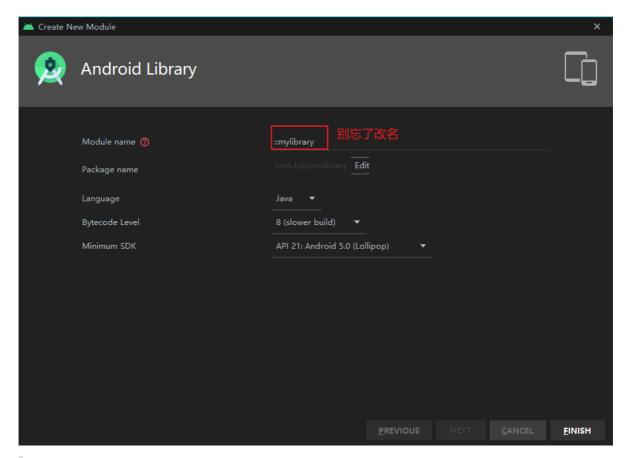

```
1 //返回数据以回调方式的回传给h5
2 window.loadUnreadCount = function(object){
      alert(JSON.stringify(object))
4 }
5
6 if (window.tim) {
     let content = {
7
8
          "callBackMethod": "loadUnreadCount",
9
      let result = window.tim.getUnreadCount(JSON.stringify(content))
10
11
      console.log(result)
12 }
```

# 关于Module创建

若是想要创建一个module, 需要进行以下几步

# 1.新建module

注意:由于封装了自动扫描包实现了Js注入功能,规定包名一定要为 com. tyky

# 2.module依赖修改

由于新建的module,没有核心库 webviewBase 的依赖,所以,需要导入依赖

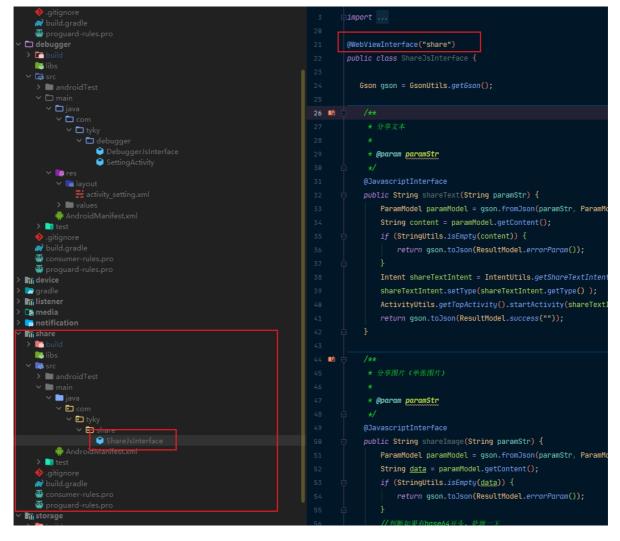

```
> image in the complete in the
```

上面的截图,由于module都是与webviewBase在同一项目中,所以可以这样写

实际上,这部分源码在对应的项目中是不存在的,所以,需要导入jitpack上的那个 webviewBase 依赖

# 3.创建Js注入类

使用Gradle进行sync,之后在新建的module中创建一个类,并标上注解 webviewInterface

@webviewInterface("share")

此注解是个人自定义的一个注解,主要是实现了自动注入Js方法的功能,而无需去设置webview,可以十分方便的实现功能扩展

后面的参数为之后注入到s中的使用方式

以上面为例:

之后注入到Js代码中,就可以在Js层通过 window.share.xx() 去调用我们原生Android的方法

# 4.创建Js注入方法

这里不再过多赘述,就写个注解即可

```
@WebViewInterface("share")
       public class ShareJsInterface {
          Gson gson = GsonUtils.getGson();
26 👊
             * @param paramStr
           @JavascriptInterface
           public String shareText(String paramStr) {
               ParamModel paramModel = gson.fromJson(paramStr, ParamModel.class);
               String content = paramModel.getContent();
               if (StringUtils.isEmpty(content)) {
                   return gson.toJson(ResultModel.errorParam());
               Intent shareTextIntent = IntentUtils.getShareTextIntent(content);
               shareTextIntent.setType(shareTextIntent.getType() );
               ActivityUtils.getTopActivity().startActivity(shareTextIntent);
               return gson.toJson(ResultModel.success(""));
44 👊
```

如果想要保持返回结果规范, 可以参考上述代码

PS: 之后使用不要忘记了依赖自己新建的module哦!!

## 补充

## 需要Application进行初始化操作

目前是使用了注解+反射方式,实现了Application的初始化,下面介绍一下步骤:

1.新建类,标明注解 @ApplicationInit

2.实现接口 ModuleInit

```
1 @ApplicationInit
2 public class UpdateModuleInit implements ModuleInit {
3
4 @Override
5 public void init(Application application) {
    //写你的初始化操作
7 }
8 }
```

PS:由于采用的包名扫描方式,需要注意包名得在com.tyky下

## 清单文件怎么写?

如果需求是要在module新建页面或者其他四大组件,可以在AndroidManifest文件中这样写对应的声明:

下面给出的Activity的声明,其他组件类似,这里不再赘述

如果是需要权限的,也是在此声明对应的权限,同时也要考虑到动态权限申请的情况 比较好的方式就是卸载对应Js方法里,用到就声明

## ParamModel实体类字段:

```
1 /**
2 * 电话号码
   */
4 private String phone;
5
6 /**
7
   * 标题
   */
8
9 private String title;
10 /**
11
   * 内容
   */
12
13 private String content;
14 /**
15
   * 类型
   */
16
17 private Integer type;
18 /**
19 * 回调方法,多个用逗号隔开
20 */
21 private String callBackMethod;
22
   /**
23
24 * shareperfence存储需要用到的key和value
25 */
26 private String key;
27 private String value;
```

# 功能清单

# 地图

考虑使用哪种地图SDK?目前只对接过百度地图SDK,各款地图SDK使用的坐标系有所差异

- 1. 获取当前位置地址
- 2. 地图选择
- 3. 地图显示当前位置
- 4. 路径规划
- 5. 路径导航

# 分享

- 1. 分享到微信好友
- 2. 分享给朋友圈
- 3. 分享到QQ

- 4. 使用浏览器打开
- 5. 单纯复制链接

# 监听回调

- 1. 网络状态监听
- 2. 来电监听
- 3. 返回键监听

# 媒体

- 1. 拍照
- 2. 录制视频
- 3. 录音
- 4. 图片选择
- 5. 图片预览
- 6. 二维码扫描
- 7. 拨打电话
- 8. 发送短信
- 9. 图片压缩
- 10. 安装apk
- 11. 文件下载
- 12. 获取剪切板内容
- 13. 写入剪切板内容

# 页面

- 1. 设置页面标题
- 2. 设置页面全屏
- 3. 设置隐藏导航条及还原
- 4. 退出APP

# 通知

- 1. 提供一个固定格式可发通知,后端服务或者是前端也可以调用实现弹出通知
- 2. 预先对接友盟SDK推送通知功能

# 登录 (如果有原生实现登录)

- 1. 提供登录用户信息
- 2. 判断用户是否登录

# 页面跳转

- 1. 跳转登录页面 (如果有原生登录功能)
- 2. 跳转微信小程序

# APP存储

- 1. 提供读写SharePerfences的功能,信息可永久保存(不卸载APP的情况下)
- 2. 提供判断是否第一次进入APP

# 硬件

- 1. NFC
- 2. 蓝牙配对
- 3. 指纹识别
- 4. 人脸识别 (包含活体检测)
- 5. 获取当前电量数值
- 6. 设置屏幕亮度
- 7. 获取当前网络状态 (数据网络还是Wifi)

# 开发辅助配置功能 (不是提供给H5的)

- 1. bugly SDK接入
- 2. 提供配置webview加载的地址 (本地资源或是网络url地址)
- 3. h5是否也要做成可配置的方式,来实现更换接口地址(优先读storege里的数据),入口设计思路为**依次按下音量键** + 和 次
- 4. 360加固快捷打包

# 推进流程疑惑点

# 1.文件预览 (pdf, doc, ppt, xls) ,

目前网上的资料只有实现了pdf和doc的预览,其他的格式没有找到有方案,

pdf可以使用webview进行预览 (使用pdf.js), doc则是需要解压doc文件, 然后实现渲染加载

自己实现比较困难,目前3个思路:

- 1.由后台+前端实现在线预览文档页面, app则可以直接通过访问url来预览文件
- 2.app内置实现,只能实现pdf或doc预览 (需要先下载在本地),其他格式不行
- 3.与分享类似, 打开一个第三方应用来查看文件 (也是需要将文件下载在本地)

# 2.分享功能,目前是实现的打开一个分享的对话框,然后有用户选择 对应的方式,这样是否满足需求?

目前支持文本,图片,图文分享

图片需要有图片的uri地址,但是h5只能闯过来数据,是否是要讲图片数据先下载在本机的缓存目录中?需要考虑传多张图片(可以是图片地址或者是base64)

## 3.下载

由于存储权限的变更,下载实现需要对多不同Android版本进行测试验证,预估可能会花费较多时间,

# 4.无法解析安装包

360加固导致的某些Android设备无法成功解析安装包,出问题的大多是 Android11或Android12,没有设备,无法复现,且没有解决思路

目前确认apk重新签名是无误的,包含了v1+v2+v3版本的签名

# 4.通知栏点击的pendintent如何封装

通知有时候需要点击跳转到具体页面,这个pendinginent该如何实现封装,接收前端传的参数?

# 困难点和疑惑点

## 1.人脸识别 (活体检测)

百度人脸识别

需要对接具体SDK,且SDK无法固定(客户可能会有所要求),无对接经验,需要参考具体SDK文档和demo进行编写,封装

集成SDK导致APP体积过大,是否考虑分离多模块进行打包?

单独库,项目配置文件,自定义gradle脚本,组件化module开发

## 2.地图导航和路径规划

各个地图采用的定位坐标系不一致,需要应该明确使用哪个平台的地图?还是多套都有所对接,然后按需使用?

地图导航和路径规划是否有必要做?

## 3.指纹识别

功能是否有需要? 无相关开发经验

## 4.打包问题

是固定使用一个包名来打包H5?固定包名是否会对相关的SDK使用有所影响?

如何动态变更包名,保证是不同的applicationId?

关于动态打包

# 5.后续更新

拆分module,依赖,后续如何更新?

# 6.腾讯x5内核

集成之后要从网络中下载渲染引擎,约莫30M

# 建设目标

- 1.支持任意的前端框架,提供原生的能力
- 2.学习成本低,轻量

3.
